National Production and Financial Database

Apr 15, 2001 12:00 PM
Daniel Uthe

Database enables comparison of pork operations and helps identify long-term profit opportunities for producers.

The National Production and Financial Database forms the central hub of a coordinated, knowledge-based information strategy developed with checkoff funds. The database was created to receive the standardized production and financial information of pork producers throughout the U.S. Additionally, it is designed to ensure long-term profit opportunities for producers regardless of operation size. Production and financial software vendors have been engaged in this process to make accurate comparisons between different types of operations.

In the past, groups have created databases with either financial or production data exclusively. Standard terms and calculations were not available. Producers commonly submitted data to a service bureau that entered the data. Producers received benchmark-type data after everyone had submitted data.

The National Production and Financial Database has changed all this. The database is outsourced to a firm that builds and manages database applications for Internet use. The National Pork Producers Council (NPPC) administers the program.

Producers access the database through a secure Internet connection to contribute to or view their reports. Data is real-time — it's instantly updated, and current values are used to create reports that can be printed or viewed on screen.

Another benefit of having the database on the Internet is the ease of changing a calculation or adding a new benchmark. All users get all upgrades at the same time.

Big or Small

Producers of any operation size can fulfill the minimum standards necessary to contribute data. Producers' participation will be facilitated by their software, which will automatically organize the appropriate data elements, summarize it in a standardized form ready for uploading to the database.

For the interim, the NPPC has developed Pork Office, a computer program that takes data from existing software systems and assembles it for transmission to the standardized database. The Cooperative Extension Service is adapting spreadsheets to send data to the National Database via Pork Office. Data submissions will undergo a detailed filtering process to

prevent errors from entering the database. If producers submit outlying values, they will be prompted to correct or verify them to guarantee their accuracy.

Data definitions and standard calculations are in the Technical Reference Manual and are available from NPPC as hardcopy or on CD-ROM. Software standardization not only allows producers to load comparable data into the database, but it also enables them to switch software without losing historic tracking data because of inconsistencies between software packages.

Production, Financial Elements

The database is divided into more than 70 production data elements and more than 100 financial data elements. These data elements are used in various combinations to produce about 250 production, financial or combination benchmarks. New data elements or benchmarks can be added any time and are available to all users.

Currently, producers are able to enter only production data in the database and therefore can use only the production benchmarks. Examples of reproductive benchmarks are shown in Figure 2. (For more details, see "Benchmarking Analysis Drives Action Plans" on page 14.)

Producers have spent the past year setting up their charts of accounts to match the standards and entering their financial data. A full year of data is required before it can be uploaded into the database for benchmarking.

Database Access

Admission into the database requires a user name and password for secure access. Producers or their consultants can log on to the database, set up, change and manage the structure of their farm and load data. Internet-based access allows producers to load and view their data from home or anywhere at any time of day. The database's address is www.benchmarks.online.com.

Producers use a program called an Internet browser, such as Netscape or Microsoft Internet Explorer, to view the database. On the first visit, a producer can register by clicking on the word "register," providing information requested and choosing a login name and password. Once submitted, an e-mail is sent to the database administrator, who then activates the producer's database access and e-mails him an acknowledgement of the activation.

A trial registration is available for producers to have temporary access to sample farm data. An e-mail is sent to the user noting their access will automatically cease on specific date. A producer must meet specific educational requirements before being granted access to the database.

First Step

The first step a producer must take when he logs on as a user is to set up an organization. (Figure 1 shows the first screen after the login.) He can choose how he wants to divide his operation based on how he keeps his financial records.

For example, if a producer keeps financial records as a whole unit, he will only be able to benchmark the operation as a single organization. Their production records will still come in by each phase of production, and they will have production information to benchmark for each production phase. However, certain financial information will not be available.

If a producer has several different operations and keeps financial records for

Welcome to www.pigwin.com.

PigWIN® - Your Pathway to Increased Pig Profits

PigWIN® is the new generation pig production management and monitoring software written specifically for Microsoft Windows®. FarmWise Systems, Inc., located in St. Paul, Minnesota, works closely with the PigWIN® development team. We have been distributing, supporting, and recommending improvements to PigWIN® since its introduction to the Americas in 1998. Note: Certain PigWIN® modules are now also available as "PigCHAMP® 5 for Windows." Don't be confused - the software is identical - only the module names are different.

OUR POLICY: Your data is your business. Software development, distribution, and support is our business. We respect your privacy. FarmWise Systems DOES NOT require you to share your pork production records with us - or with anyone else. Switch to PigWIN® today and assure the confidentiality of your data.

Evaluate PigWIN® FREE for 30 days on your own computer. To receive a CD containing the PigWIN® 30-day trial version, call us at **1-877-4PIGWIN** or **651-765-8240** or click on the link to send an E-mail message to us at: support@farmwise.com. We will send you a CD at no charge.

- **Annual Subscription - No lump sum purchase or upgrade costs**
- **PigWIN® subscription includes user support by telephone, e-mail or fax**
- **Modular format - purchase only what you need.**
 - **PigLITTER** .. Breeding Herd Management
 - **PigGAIN** Nursery and Finisher Pigs
 - **PigHERD** Database Applications / Custom Report Generator
 - **PigPAD** Data Entry & Recall with PalmPilot® or Handspring Visor®
 - **PigRANK** Multiple Farm Comparisons
 - **PigBATCH** .. Rapid Keyboard Data Entry.
- **Remember - The continued confidentiality of your pork production data is assured when you use PigWIN®. Don't delay. Switch to PigWIN today! Call and ask for your FREE, no obligation 30-day trial CD.**

Shujie Yao

Department of Economics, University of Portsmouth, Southsea, Hants, PO4 8JF, UK

Received 15 August 1998; accepted 14 November 1998. ; Available online 9 April 2002.

Abstract

Government intervention can create or enhance private incentives for farmers to produce certain crops at the expense of others. It may also induce allocative inefficiency. However, when externalities exist, or when market failures prevent the production system from achieving its best allocative efficiency, Government intervention may not be as undesirable as it is usually thought. This paper develops a modified policy analysis matrix, PAM, and uses the Thai agricultural diversification programme to demonstrate that Government policy to encourage more production of legume crops at the expense of rice is not as undesirable as it is criticized by some economists when water charging and environmental cost are considered.

Contract farming. Report of the Committee of inquiry on contract farming.

Barker, Sir, J.

UK; Ministry of Agriculture, Fisheries and Food

COMMAND PAPER

(5099): 152pp.

Publication Year: 1972

2 tab., 55 app.

Publisher: -- London, HMSO., UK

Price: pounds-sterling 1.00

Language: English

Document Type: Miscellaneous

The Committee of Inquiry on Contract Farming was appointed in June 1971 to "assemble and consider the information about the various arrangements for the production of crops, livestock and other farm produce under commercial contract; also to advise on the extent and type of likely future developments in this field and on the scope for such developments in the national interest". Part I of the resulting report describes contract farming in its current manifestations, and considers the way in which it would be likely to develop; Part II analyzes the public interest question and discusses the pro's and con's of contracting; Part III contains conclusions, in particular findings on the possibilities for influencing future progress. The three principal findings are: that there is scope for more contract farming; that encouragement is required for more horizontal grouping of producers; and that there is urgent need for a coordinating body spanning agricultural production and marketing particularly to match in with EEC conditions. Such a body, perhaps named the UK Agriculture and Food Development Authority, would provide management and development advice, market intelligence and finance, eventually on a self-supporting basis. It would help to form farming and producer marketing groups which would be eligible for aid from EEC farm funds. The groups would help farmers to match their selling to the increasing size of food manufacturing buying interests.
